Farm & Labor Medicine

Farm and Labor Medicine means approaching people who use their bodies for their jobs as a unique group of patients. This requires an understanding of different activities and different injuries. Dr. Goding focuses his practice on understanding and treating the conditions which prevent people from functioning and working. Dr. Goding visits job sites and interviews workers and employers in an attempt to understand these issues specifically. Join the conversation on March 28!

**Hosted by CCFB Women's
Committee**
